%

$$14 \% 5 = 4$$

$$40 \% 6 = 4$$

$A \% B$ = Remainder when A is divided by B

$$\{ \text{Input} \} \% B = \{ 0, B-1 \}$$

Modular Arithmetic:

$$(a+b) \% m = \underbrace{(a \% m + b \% m)}_{\{0, m-1\}} \% m \rightarrow 1$$

$$\{0, m-1\} \quad \{0, m-1\} \quad \{0, m-1\}$$

$$(a * b) \% m = \underbrace{(a \% m * b \% m)}_{\{0, m-1\}} \% m \rightarrow 2$$

$$(a - b) \% m = (a \% m - b \% m) \% m$$

$a = 13, b = 9, m = 5$ $(\underbrace{13 \% 5}_{1} - \underbrace{9 \% 5}_{1}) \% 5 \rightarrow \text{In python } \rightarrow$

$$(13 - 9) \% 5 = 4 = (3 - 4) \% 5 = (-1 \% 5) \rightarrow \text{In Java/Cpp/JS }$$

$$(a - b) \% m = (a \% m - b \% m) \% m + m \% m$$

$$(a - b) \% m = \underbrace{(a \% m - b \% m + m)}_{(3 - 4 + 5) \% 5} \% m \rightarrow 3$$

$$\begin{array}{ll} a = 13 & (13 - 9) \% 5 \\ b = 9 & (3 - 4 + 5) \% 5 \\ m = 5 & (-1 + 5) \% 5 = (4 \% 5) = 4 \end{array}$$

Q1 Given A, B & $A > B$ find no. of m such that

$$A\%m = B\%m$$

Ex: $A = 16, B = 4, \text{ ans} = 6$ Idea: loop from 1 to A & get all values $A\%m == B\%m$

$$\begin{array}{c} m \\ \hline 16\%m = 4\%m \end{array}$$

$$1 \quad 0 \quad 0$$

$$2 \quad 0 \quad 0$$

$$3 \quad 1 \quad 1$$

$$4 \quad 0 \quad 0$$

$$6 \quad 4 \quad 4$$

$$12 \quad 4 \quad 4$$

$M > A$ not possible

$$c = 0;$$

$$i = 1; i <= A; i++ \{$$

$$\text{if } (A\%i == B\%i) \{$$

$$c = c + 1$$

3

Tc: $O(4)$

Idea: $A\%m = B\%m$

$$A\%m - B\%m = 0$$

Add m on both sides

$$A\%m - B\%m + m = m$$

Apply $\%m$ on both sides

$$\frac{[A\%m - B\%m + m]\%m}{\Downarrow} = m\%m = 0$$

$$(A - B)\%m = 0$$

Obs: $m = \text{all factors of } (A - B)$

Calculate no of factors for $A - B$: Tc: $O(\sqrt{a-b})$ Sc: $O(1)$

Q8) Given $ar[N]$, calculate no of pairs i, j such that

$$\{ar[i] + ar[j]\} \% m = 0$$

Note: $i \neq j$ and $\overrightarrow{\text{pair}(i, j)}$ is same as $\overrightarrow{\text{pair}(j, i)}$

Consider pair only once:

Ex:

$$ar[6] = \{ 4, 7, 6, 5, 5, 3 \} \quad m = 3, \underline{\text{ans}} = 5$$

i	j	$ar[i]$	$ar[j]$	$\{ar[i] + ar[j]\} \% m$
0	3	4	5	$(9) \% 3 = 0$
0	4	4	5	$(9) \% 3 = 0$
1	3	7	5	$(12) \% 3 = 0$
1	4	7	5	$(12) \% 3 = 0$
2	5	6	3	$(9) \% 3 = 0$

$$ar[7] = \{ 13, 14, 22, 3, 32, 19, 16 \} \quad m = 4 \quad \underline{\text{ans}} = 4$$

i	j	$ar[i]$	$ar[j]$	$\{ar[i] + ar[j]\} \% m$
0	3	13	3	$16 \% 4 = 0$
0	5	13	19	$32 \% 4 = 0$
1	2	14	22	$36 \% 4 = 0$
4	6	32	16	$48 \% 4 = 0$

Idea: Check for all pairs, if their sum $\% m = 0 \Rightarrow \underline{\text{TODO}}$

TC: $\Theta(N^2)$ SC: $\Theta(1)$

Idea 2: $(ar[i] + ar[j]) \% m = 0$

Take $\% m$ principle

$$\left[\underbrace{ar[i]\%m}_{[0, m-1]} + \underbrace{ar[j]\%m}_{[0, m-1]} \right] \% m = 0$$

Ex: $\{2 + m-2\} \% m = 0$

Ex:

$$A = 13, B ? \quad m = 4$$

$$A \% m + B \% m = 0$$

$$(A + B) \% m = 0$$

$$[A \% m + B \% m] \% m = 0$$

$$\left[1 + \frac{\overbrace{[0, m-1]}^{B \% m}}{3} \right] \% 4 = 0$$

$$[A \% m + B \% m] \% m = 0$$

$$\begin{aligned} & [0 + \frac{\overbrace{[0, 7]}^{B \% 8}}{8}] \% 8 = 0 \\ & \underline{\underline{=}} \end{aligned}$$

$$A = 7, \quad m = 3 \quad B \% m = 2$$

$$A \% m + B \% m = 0$$

$$[A \% m + B \% m] \% m = 0$$

$$[A \% m + B \% m] \% m = 0$$

$$\left[\underbrace{1 + B \% 3}_{2} \right] \% 3 = 0$$

$$[A \% m + B \% m] \% m = 0$$

$$\left[\underbrace{5 + B \% 10}_{2} \right] \% 10 = 0$$

$$[A \% m + B \% m] \% m = 0$$

Idea: $(\text{arr}[i] + \text{arr}[j]) \% m = 0$

$$\underbrace{[\text{arr}[i]\%m + \text{arr}[j]\%m]}_{0+0} \% m = 0$$

$$0 \qquad \qquad 0$$

$$1 \longleftrightarrow m-1$$

$$2 \qquad \qquad m-2$$

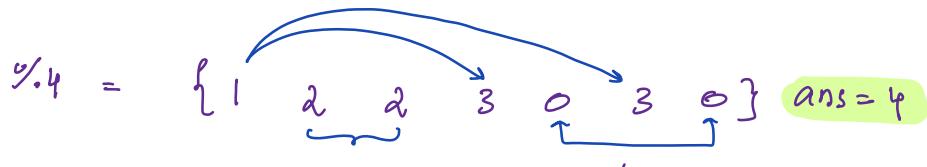

In general $k \qquad \qquad m-k$

We can form a pair between

$$\underbrace{\text{arr}[i]\%m = k \text{ & } \text{arr}[j]\%m = m-k}$$

↳ obs: we need $\text{arr}[j]\%m$

Ex: $\text{arr}[+] = \{13, 14, 22, 3, 32, 19, 16\} \quad m=4$

arr , $M=10$, $\text{cnt}[10]=904$

{29 11 21 17 2 5 4 6 23 13 26 14 18 15 30 35 50 20 40, 9}
